

Quality Control Lab Technician – Asphalt Plant

Job Summary:

The role of the Quality Control Technician for the Asphalt Plant is to ensure that the asphalt produced by the plant meets the specifications required by the customer. The Control Technician communicates with and assists plant personnel to ensure the best quality product possible.

Responsibilities:

- Perform tests on mix produced by the asphalt plant.
- Complete gradations for material used to create asphalt mix designs.
- Complete on-site coring of newly paved asphalt to capture density results.
- Input test data to Microsoft Excel for record keeping purposes.
- Work with MNDOT officials and communicate test results to the state.
- Ensure all job duties are performed while obeying the company safety policies and procedures.
- Maintain MNDOT certifications for Asphalt QC Tech.

Education, Skills, and Requirements

- Proficiency in Microsoft Excel and general computer knowledge.
- Highly organized and able to multi-task in a fast-paced environment.
- Asphalt Plant QC experience preferred but not required.
- Must have a clean driving record and valid driver's license.
- Must have a high school diploma.
- Must be able to lift and carry up to 70lbs
- Must have flexibility to work extended hours as well as Saturdays.

Pay and Benefits

This position is a union position and pay is based on experience and education. The position is seasonal, with a start date around mid-March and end date near December 1st (weather dependent). Plant personnel are laid-off during the winter months.
