

Construction Technology Manager

Responsibilities – Manage, implement, maintain, and train other team members using construction technologies used in the field and office. This will include but is not limited to managing GPS machine control, creating and maintaining models for GPS machine control, completing take offs on plans, and thermal imaging and intelligent compaction in paving. This is a leadership position, and this person will work with other team members, vendors, engineers, and surveyors to use and implement construction technologies to create efficiencies and meet specifications in all our operations.

The ideal candidate will have the following experience – 2 years of managing GPS machine control and experience with the following software: Trimble, Trimble Business Center, and Agtek.

This is a year-round salaried position. Compensation is negotiable and based on previous experience. Compensation package will include medical and dental insurance, retirement (401k) plan and company contributions, company vehicle, and flexibility for a work/life balance.
